PROJECTS

Leader board in Python/HTML/CSS :
For a poker club which I am president, I created a leader board for members based on their results in the form of a site. Coded in HTML and CSS with a python sort algorithm.

Ray Tracing in Java :
This ray Tracing that I made during a tutored project reads instructions from a text file and simulates rays of light, the result is displayed on an image.

Connect 4 in HTML/CSS :
This connect 4 is a functional site thanks to a python loop acting as a server. The appearance of the site is coded in HTML and CSS.

Battleship in Java :
I realized a Battleship in Java with an graphic interface.
